42% odds the AI boom crashes 40% within a year

20 AI leaders, equal weight. Chance of a 40%+ fall from the Oct 6 peak, by months ahead.

Bonus: Sornette's bubble clock, run 4 days before the peak, put the top at Oct 2. It came Oct 6.

Model: ICARUS survival ensemble, 67 assets since 1927.

Viktor Berg

15 of 20 AI leaders are already in bear markets

Fall from each company's all-time high.

Red = down 20% or more.

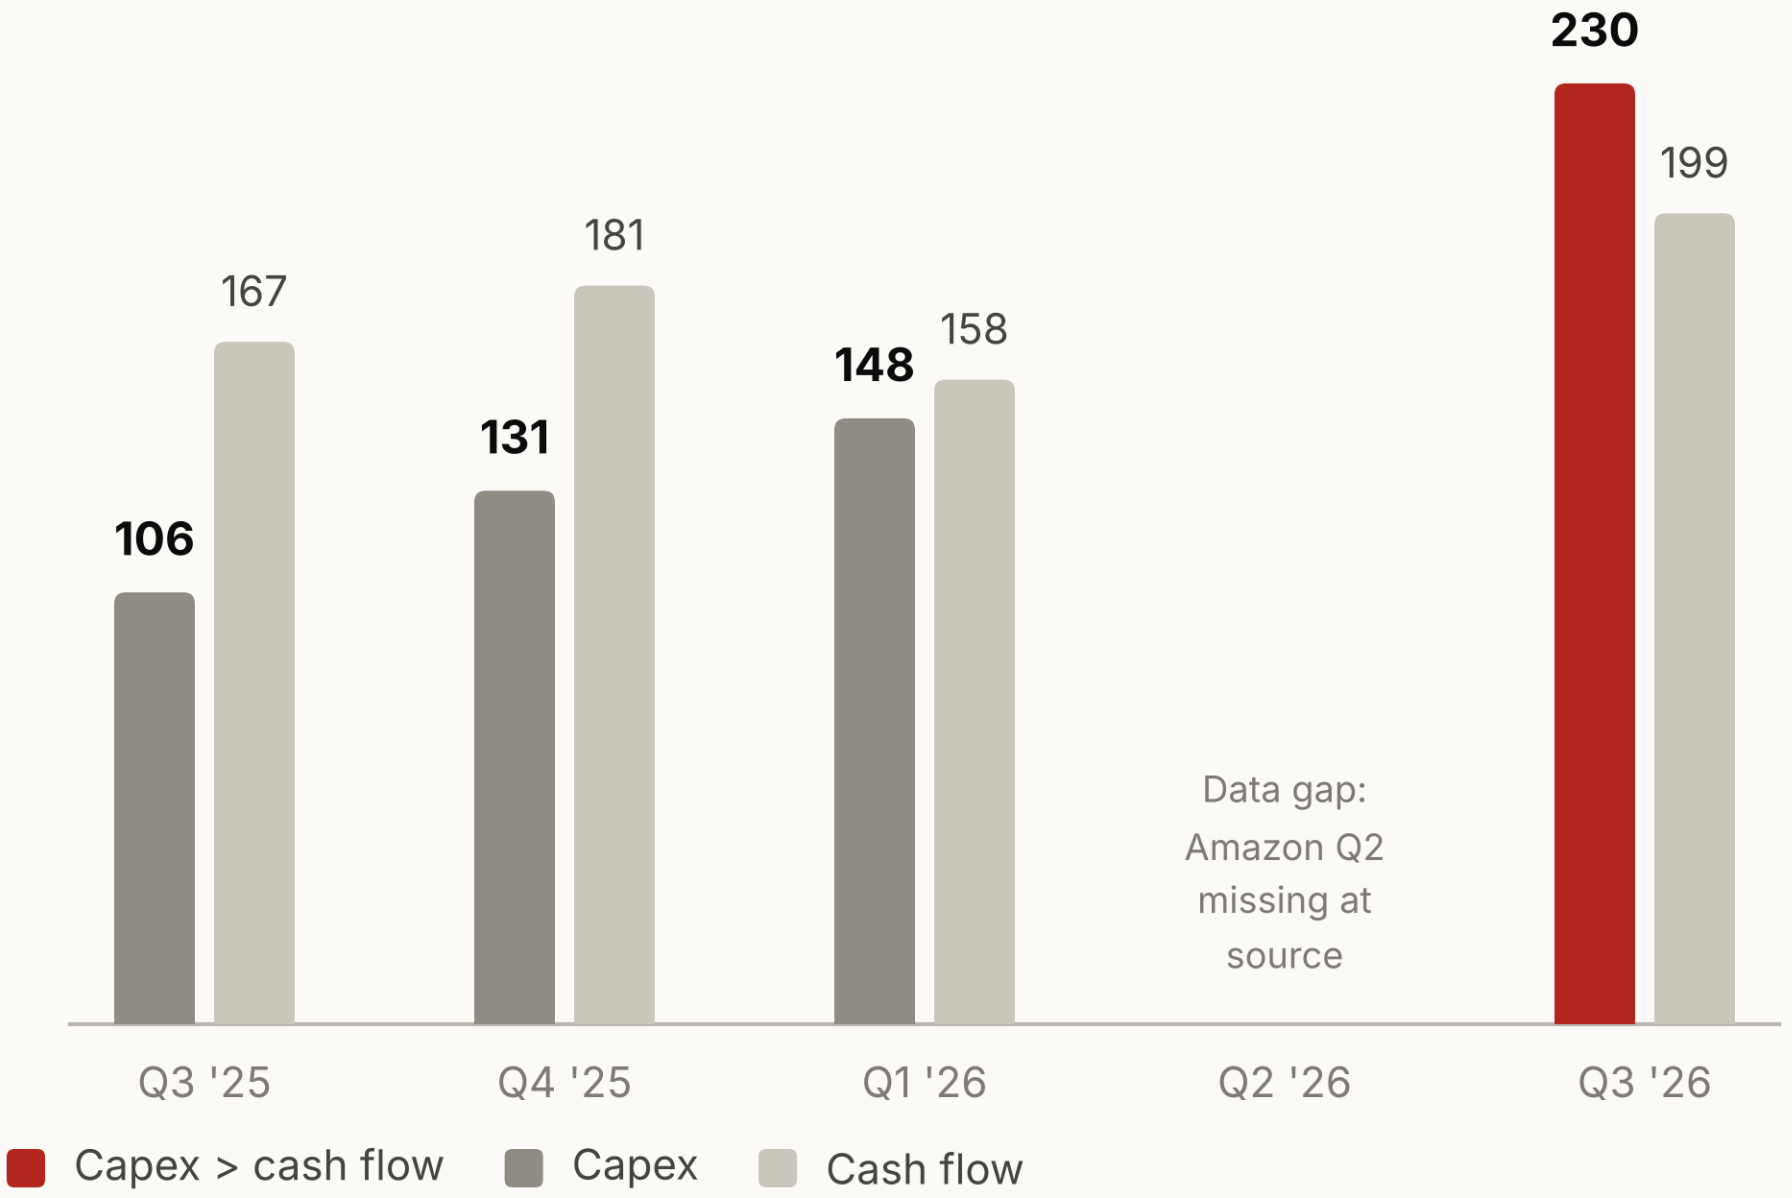

The generals hold.
The troops are falling.
Same pattern as 2000.

As of 2026-11-02. Data: Yahoo Finance.

Viktor Berg

Big Tech's capex now tops the cash its businesses make

Microsoft, Alphabet, Amazon, Meta, Oracle, per quarter, $B: capex vs. operating cash flow.

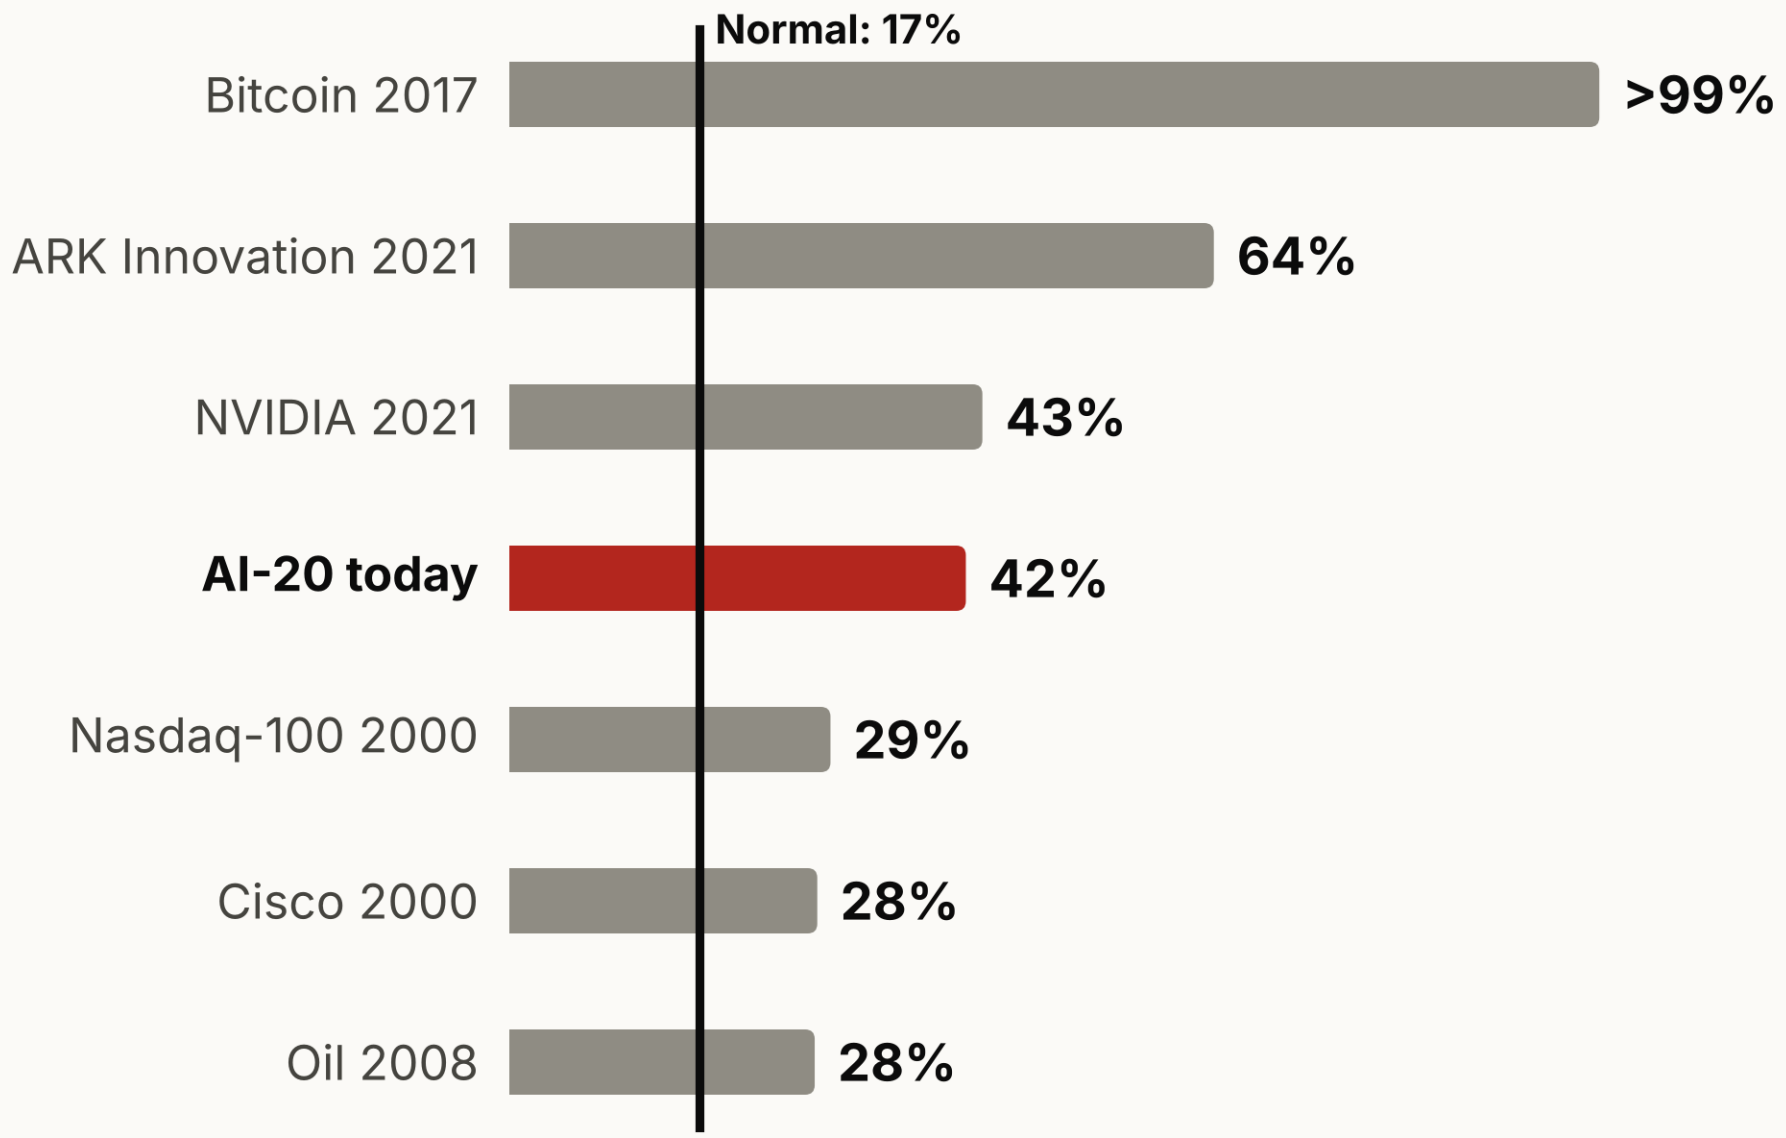

And Anthropic's IPO? At $1.5T it needs ~$802B of revenue by 2036, more than Amazon's $717B today.

Company statements via Yahoo Finance; reverse DCF, 20,000 draws.

Viktor Berg

The same model at the top of past bubbles

Odds of a 40%+ crash within 12 months, at each peak.
Out of sample: no peeking at what came next.

Not a sell signal. A risk, not a certainty.
But the AI boom now looks like the bubbles before it.

Walk-forward backtest 1995-2024, AUC 0.78. Code on GitHub.
